Recent Developments in Biomolecular NMR: RSC (RSC Biomolecular Sciences)

NMR spectroscopy is widely used in biomolecular science particularly for structure determination of proteins, nucleic acids and carbohydrates. Much of the innovation within NMR spectroscopy has been within the field of protein NMR spectroscopy, an important technique in structural biology.

Filling a gap in the literature, this book draws together experts in the field to discuss the real advances in NMR methods that have occurred or have an impact on the biomolecular field in the last few years. The coverage includes recent developments in using NMR for determination of protein structures, membrane proteins, the dynamics of RNA and advances in NMR in drug discovery. Edited by leading biological NMR spectroscopists, the book is an essential reference for researchers in industry and academia interested in or joining this bioanalytical field.
