The Variance Gamma (VG) Model with Long Range Dependence: A model for financial data incorporating long range dependence in squared returns Richard Finlay

This work mainly builds on the Variance Gamma (VG) model for financial assets over time of Madan & Seneta (1990) and Madan, Carr & Chang (1998), although the model based on the t distribution championed in Heyde & Leonenko (2005) is also given attention. The primary contribution of the work is the development of VG models, and the extension of t models, which accommodate a dependence structure in asset price returns. In particular it has become increasingly clear that while returns (log price increments) of historical financial asset time series appear as a reasonable approximation of independent and identically distributed data, squared and absolute returns do not. In fact squared and absolute returns show evidence of being long range dependent through time, with autocorrelation functions that are still significant after 50 to 100 lags. Given this evidence against the assumption of independent returns, it is important that models for financial assets be able to accommodate a dependence structure.

From reader reviews:

Michael Madden:

The book The Variance Gamma (VG) Model with Long Range Dependence: A model for financial data incorporating long range dependence in squared returns can give more knowledge and also the precise product information about everything you want. So just why must we leave a good thing like a book The Variance Gamma (VG) Model with Long Range Dependence: A model for financial data incorporating long range dependence in squared returns? A few of you have a different opinion about book. But one aim which book can give many details for us. It is absolutely correct. Right now, try to closer with your book. Knowledge or info that you take for that, you are able to give for each other; you can share all of these. Book The Variance Gamma (VG) Model with Long Range Dependence: A model for financial data incorporating long range dependence in squared returns has simple shape however, you know: it has great and large function for you. You can appear the enormous world by open and read a reserve. So it is very wonderful.

Alma Hillyer:

Reading a publication can be one of a lot of exercise that everyone in the world adores. Do you like reading book consequently. There are a lot of reasons why people enjoyed.
