Water-Gas Apparatus and the Use of Central District Coal as Generator Fuel (Classic Reprint)

William W Odell

Excerpt from Water-Gas Apparatus and the Use of Central District Coal as Generator Fuel

By reason of the greatly increased cost of the gas oil used to enrich water gas, and the higher costs of coal and labor, many gas companies, especially those having franchises that call for the delivery of gas of a certain quality at a certain price per thousand feet, are having financial difficulties. Reconstruction of plants to manufacture coal gas instead of water gas is difficult if not economically impossible under present conditions. The situation calls for the use of practicable economies and methods. One of these economies is the use of cheaper grades of coal to replace anthracite or coke. In the course of its investigations for increasing efficiency in the use of fuel the Bureau of Mines has given attention to various problems bearing on the manufacture of water gas. This paper presents certain preliminary studies made while considering the possibility of substituting Indiana and Illinois coal for coke in water-gas generator sets.

About the Publisher

Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com

This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.
