Nonlinear System Identification: NARMAX Methods in the Time, Frequency, and Spatio-Temporal Domains

Stephen A. Billings

Nonlinear System Identification: NARMAX Methods in the Time, Frequency, and Spatio-Temporal Domains Stephen A. Billings

Nonlinear System Identification: NARMAX Methods in the Time, Frequency, and Spatio-Temporal Domains describes a comprehensive framework for the identification and analysis of nonlinear dynamic systems in the time, frequency, and spatio-temporal domains. This book is written with an emphasis on making the algorithms accessible so that they can be applied and used in practice.

Includes coverage of:

- The NARMAX (nonlinear autoregressive moving average with exogenous inputs) model
- The orthogonal least squares algorithm that allows models to be built term by term where the error reduction ratio reveals the percentage contribution of each model term
- Statistical and qualitative model validation methods that can be applied to any model class
- Generalised frequency response functions which provide significant insight into nonlinear behaviours
- A completely new class of filters that can move, split, spread, and focus energy
- The response spectrum map and the study of sub harmonic and severely nonlinear systems
- Algorithms that can track rapid time variation in both linear and nonlinear systems
- The important class of spatio-temporal systems that evolve over both space and time
- Many case study examples from modelling space weather, through identification of a model of the visual processing system of fruit flies, to tracking causality in EEG data are all included to demonstrate how easily the methods can be applied in practice and to show the insight that the algorithms reveal even for complex systems

NARMAX algorithms provide a fundamentally different approach to nonlinear system identification and signal processing for nonlinear systems. NARMAX methods provide models that are transparent, which can easily be analysed, and which can be used to solve real problems.

This book is intended for graduates, postgraduates and researchers in the sciences and engineering, and also for users from other fields who have collected data and who wish to identify models to help to understand the dynamics of their systems.

From reader reviews:

Pearl McLean:

Nowadays reading books become more and more than want or need but also work as a life style. This reading routine give you lot of advantages. Advantages you got of course the knowledge the particular information inside the book which improve your knowledge and information. The knowledge you get based on what kind of guide you read, if you want drive more knowledge just go with knowledge books but if you want really feel happy read one with theme for entertaining including comic or novel. Typically the Nonlinear System Identification: NARMAX Methods in the Time, Frequency, and Spatio-Temporal Domains is kind of publication which is giving the reader unforeseen experience.

Peggy Mitchum:

People live in this new day of lifestyle always make an effort to and must have the spare time or they will get wide range of stress from both way of life and work. So , once we ask do people have extra time, we will say absolutely indeed. People is human not a robot. Then we request again, what kind of activity are there when the spare time coming to an individual of course your answer will unlimited right. Then do you try this one, reading guides. It can be your alternative within spending your spare time, typically the book you have read is actually Nonlinear System Identification: NARMAX Methods in the Time, Frequency, and Spatio-Temporal Domains.

Abel Cooke:

On this era which is the greater man or who has ability in doing something more are more precious than other. Do you want to become among it? It is just simple strategy to have that. What you are related is just spending your time not very much but quite enough to experience a look at some books. One of several books in the top checklist in your reading list will be Nonlinear System Identification: NARMAX Methods in the Time, Frequency, and Spatio-Temporal Domains. This book and that is qualified as The Hungry Hillsides can get you closer in becoming precious person. By looking right up and review this guide you can get many advantages.

Michael Kenney:

You may get this Nonlinear System Identification: NARMAX Methods in the Time, Frequency, and Spatio-Temporal Domains by go to the bookstore or Mall. Only viewing or reviewing it may to be your solve difficulty if you get difficulties for your knowledge. Kinds of this guide are various. Not only by written or printed but additionally can you enjoy this book by e-book. In the modern era like now, you just looking by your local mobile phone and searching what their problem. Right now, choose your ways to get more information about your guide. It is most important to arrange you to ultimately make your knowledge are still revise. Let's try to choose suitable ways for you.
