Advances in Bistatic Radar (Electromagnetics and Radar)

Advances in Bistatic Radar (Electromagnetics and Radar)

Advances in Bistatic Radar updates and extends bistatic and multistatic radar developments since the publication of Willis' Bistatic Radar in 1991. New and recently declassified military applications are documented, civil applications are detailed including commercial and scientific systems and leading radar engineers provide expertise to each of these applications. Advances in Bistatic Radar consists of two major sections: Bistatic/Multistatic Radar Systems and Bistatic Clutter and Signal Processing. Starting with a history update, the first section documents the early and now declassified military AN/FPS-23 Flutter DEW-Line Gap-filler, and high frequency (HF) bistatic radars developed for missile attack warning. It then documents the recently developed passive bistatic and multistatic radars exploiting commercial broadcast transmitters for military and civilian air surveillance. Next, the section documents scientific bistatic radar systems for planetary exploration, which have exploited data link transmitters over the last forty years; ionospheric measurements, again exploiting commercial broadcast transmitters; and 3-D wind field measurements using a bistatic receiver hitchhiking off doppler weather radars. This last application has been commercialized. The second section starts by documenting the full, unclassified bistatic clutter scattering coefficient data base, along with the theory and analysis supporting its development. The section then details two major clutter-related developments, spotlight bistatic synthetic aperture radar (SAR), which can now generate high resolution images using bistatic autofocus and related techniques; and adaptive moving target indication (MTI), which allows cancellation of nonstationary clutter generated by moving (i.e. airborne) platforms through the use of bistatic space-time adaptive processing (STAP).

From reader reviews:

Marisa Reber:

Information is provisions for anyone to get better life, information presently can get by anyone with everywhere. The information can be a information or any news even a concern. What people must be consider while those information which is within the former life are hard to be find than now could be taking seriously which one is acceptable to believe or which one typically the resource are convinced. If you receive the unstable resource then you have it as your main information it will have huge disadvantage for you. All those possibilities will not happen in you if you take Advances in Bistatic Radar (Electromagnetics and Radar) as your daily resource information.

James Rodriguez:

Precisely why? Because this Advances in Bistatic Radar (Electromagnetics and Radar) is an unordinary book that the inside of the publication waiting for you to snap it but latter it will shock you with the secret the idea inside. Reading this book close to it was fantastic author who all write the book in such remarkable way makes the content inside easier to understand, entertaining technique but still convey the meaning entirely. So , it is good for you for not hesitating having this any more or you going to regret it. This book will give you a lot of advantages than the other book have got such as help improving your expertise and your critical thinking approach. So , still want to postpone having that book? If I were you I will go to the guide store hurriedly.

Edna Barnett:

This Advances in Bistatic Radar (Electromagnetics and Radar) is completely new way for you who has interest to look for some information because it relief your hunger info. Getting deeper you in it getting knowledge more you know or else you who still having little bit of digest in reading this Advances in Bistatic Radar (Electromagnetics and Radar) can be the light food for yourself because the information inside this book is easy to get through anyone. These books produce itself in the form that is reachable by anyone, yeah I mean in the e-book type. People who think that in book form make them feel drowsy even dizzy this guide is the answer. So there is no in reading a publication especially this one. You can find what you are looking for. It should be here for you actually. So , don't miss that! Just read this e-book type for your better life along with knowledge.

Dorothy Vinson:

A lot of book has printed but it is different. You can get it by online on social media. You can choose the most beneficial book for you, science, amusing, novel, or whatever simply by searching from it. It is named of book Advances in Bistatic Radar (Electromagnetics and Radar). Contain your knowledge by it. Without departing the printed book, it could possibly add your knowledge and make an individual happier to read. It is most important that, you must aware about guide. It can bring you from one location to other place.
