Programming for Engineers: A Foundational Approach to Learning C and Matlab Aaron R. Bradley

To learn to program is to be initiated into an entirely new way of thinking about engineering, mathematics, and the world in general. Computation is integral to all modern engineering disciplines, so the better you are at programming, the better you will be in your chosen field.

The author departs radically from the typical presentation by teaching concepts and techniques in a rigorous manner rather than listing how to use libraries and functions. He presents pointers in the very first chapter as part of the development of a computational model that facilitates an ab initio presentation of subjects such as function calls, call-by-reference, arrays, the stack, and the heap. The model also allows students to practice the essential skill of memory manipulation throughout the entire course rather than just at the end. As a result, this textbook goes further than is typical for a one-semester course -- abstract data types and linked lists, for example, are covered in depth. The computational model will also serve students in their adventures with programming beyond the course: instead of falling back on rules, they can think through the model to decide how a new programming concept fits with what they already know.

The book is appropriate for undergraduate students of engineering and computer science, and graduate students of other disciplines. It contains many exercises integrated into the main text, and the author has made the source code available online.

From reader reviews:

Hans Diaz:

Have you spare time for the day? What do you do when you have a lot more or little spare time? Sure, you can choose the suitable activity regarding spend your time. Any person spent their spare time to take a walk, shopping, or went to often the Mall. How about open or maybe read a book called Programming for Engineers: A Foundational Approach to Learning C and Matlab? Maybe it is to get best activity for you. You realize beside you can spend your time along with your favorite's book, you can more intelligent than before. Do you agree with it has the opinion or you have additional opinion?

Jonathan Gomes:

People live in this new day time of lifestyle always make an effort to and must have the time or they will get large amount of stress from both daily life and work. So , whenever we ask do people have free time, we will say absolutely yes. People is human not really a robot. Then we consult again, what kind of activity do you have when the spare time coming to a person of course your answer will probably unlimited right. Then ever try this one, reading guides. It can be your alternative within spending your spare time, typically the book you have read is definitely Programming for Engineers: A Foundational Approach to Learning C and Matlab.

James Brown:

Many people spending their time period by playing outside using friends, fun activity with family or just watching TV all day long. You can have new activity to spend your whole day by reading through a book. Ugh, do you think reading a book really can hard because you have to bring the book everywhere? It ok you can have the e-book, taking everywhere you want in your Cell phone. Like Programming for Engineers: A Foundational Approach to Learning C and Matlab which is having the e-book version. So , try out this book? Let's view.

Bessie Scudder:

As we know that book is essential thing to add our information for everything. By a reserve we can know everything we want. A book is a range of written, printed, illustrated or maybe blank sheet. Every year had been exactly added. This publication Programming for Engineers: A Foundational Approach to Learning C and Matlab was filled in relation to science. Spend your time to add your knowledge about your scientific disciplines competence. Some people has distinct feel when they reading any book. If you know how big benefit of a book, you can sense enjoy to read a publication. In the modern era like today, many ways to get book that you just wanted.
