Book Description

Everything humans interact with has an experience associated with it. Some are good, some are bad, but only recently have we begun to consciously design these experiences. We are now at a point in time when experience-design has suddenly exploded into the consciousness of business people and ordinary people all over the world.

This book addresses common queries related to Experience Design such as “what is it?” and “why has it become so important?” “Who pays for it and why? Who creates it and how? Who is it created for and why is it effective?”

The book begins with the general process of experience design and offers you a holistic understanding of how the sequencing of key players, drivers, disciplines, methodologies, and activities yields the desired outcomes. Further on, you will learn the physical and psychological dimensions of Human Experience as a good understanding of these is required to design effective product experiences.

Next you’ll see the various techniques that XD practitioners use to create new and innovative experiences across the board and even in the driest products, such as insurance or tax preparation. Moving forward, we’ll look at the various methods that facilitate collaborative refinement of visualization and ideas, and you’ll understand how XD practitioners go about validating whether or not concepts and advanced designs meet users’ needs and expectations. At the end of the book, you will look at industry best practices and address the design continuum challenge
