Modern Hearing Aids: Verification, Outcome Measures, And Follow-up Ruth Bentler, H. Gustav Mueller, Todd A. Ricketts

Modern Hearing Aids: Function, Features, and Advanced Algorithms focuses on the selection and fitting of hearing aids and the outcome procedures and measures that follow. The world-renowned authors provide guidance for selecting prescriptive fitting approaches and detailed protocols for the use of behavioral measures and real-ear speech mapping to both verify the fitting and assess special hearing aid features. Extensive discussion is included regarding the techniques, procedures, and test protocols for probe-microphone measures. The authors have included numerous postfitting tests that can be conducted along with step-by-step protocols for their administration and scoring. Follow-up care and auditory training options also are reviewed.

Written in an accessible and easy-to-read style, this text includes not only reference information, but also tools supported by research and clinical experience. The information is presented in a way that is both accessible to clinical students with little experience in the field and with enough depth for even the serious hearing aid researcher.

Key Features:

- Brief paragraphs identified as "Technical Tips," "Key Concepts," "Things to Remember", "Points to Ponder" and "Soapbox" for quick reference
- "Endnotes" at the back of the book--interesting tidbits of information not quite relevant enough to include in the chapters, but too good to toss aside
- Humor infused throughout
