Secrets of the Atom

Dr. Weldon Vlasak

Secrets of the Atom Dr. Weldon Vlasak

The first realistic unified field theory in history. The problem with unified field theories has always been resolving the difference between the strong electrical forces of the atom and the gravitational force.

Physicists have been searching for mythical particles that are believed to produce gravitational forces, but none has ever been found. Dr. Vlasak has proposed a completely new approach. He asserts that, since the gravitational force is so much lower than the electrical force, gravity is a consequence of the nonlinear electrical forces of the atom.

Based on his first two books, "The Secret of Gravity and Other Mysteries of the Universe" and "The Electric Atom," he adds a new radiation theory. He has solved the mystery of the barrier at the center of the atom and asserts that an "ether" is indeed present in the universe and presents compelling evidence to support the theory. The analysis is based on viewing the hydrogen atom as an electronic circuit, similar to the method of Planck, and using force variables, as was Newton's approach. All of these theories are shown to be physically realistic and testable.

These are new and different ideas that portray the universe as an immense sea of electricity.
