Solar Powered Charging Infrastructure for Electric Vehicles: A Sustainable Development

Solar Powered Charging Infrastructure for Electric Vehicles: A Sustainable Development

The Paris Agreement on Climate Change adopted on December 12, 2015 is a voluntary effort to reduce greenhouse gas emissions. In order to reach the goals of this agreement, there is a need to generate electricity without greenhouse gas emissions and to electrify transportation. An infrastructure of SPCSs can help accomplish both of these transitions. Globally, expenditures associated with the generation, transmission, and use of electricity are more than one trillion dollars per year. Annual transportation expenditures are also more than one trillion dollars per year. Almost everyone will be impacted by these changes in transportation, solar power generation, and smart grid developments. The benefits of reducing greenhouse gas emissions will differ with location, but all will be impacted.

This book is about the benefits associated with adding solar panels to parking lots to generate electricity, reduce greenhouse gas emissions, and provide shade and shelter from rain and snow. The electricity can flow into the power grid or be used to charge electric vehicles (EVs). Solar powered charging stations (SPCSs) are already in many parking lots in many countries of the world. The prices of solar panels have decreased recently, and about 30% of the new U.S. electrical generating capacity in 2015 was from solar energy. More than one million EVs are in service in 2016, and there are significant benefits associated with a convenient charging infrastructure of SPCSs to support transportation with electric vehicles.

Solar Powered Charging Infrastructure for Electric Vehicles: A Sustainable Development aims to share information on pathways from our present situation to a world with a more sustainable transportation system with EVs, SPCSs, a modernized smart power grid with energy storage, reduced greenhouse gas emissions, and better urban air quality. Covering 200 million parking spaces with solar panels can generate about 1/4 of the electricity that was generated in 2014 in the United States. Millions of EVs with 20 to 50 kWh of battery storage can help with the transition to wind and solar power generation through owners responding to time-of-use prices.

Written for all audiences, high school and college teachers and students, those in industry and government, and those involved in community issues will benefit by learning more about the topics addressed in the book. Those working with electrical power and transportation, who will be in the middle of the transition, will want to learn about all of the challenges and developments that are addressed here.

From reader reviews:

Robert Burke:

In other case, little persons like to read book Solar Powered Charging Infrastructure for Electric Vehicles: A Sustainable Development. You can choose the best book if you'd prefer reading a book. Given that we know about how is important a book Solar Powered Charging Infrastructure for Electric Vehicles: A Sustainable Development. You can add information and of course you can around the world with a book. Absolutely right, due to the fact from book you can learn everything! From your country until finally foreign or abroad you will be known. About simple factor until wonderful thing it is possible to know that. In this era, we could open a book or even searching by internet system. It is called e-book. You should use it when you feel bored to go to the library. Let's examine.

Stacey Eades:

Book is to be different for each and every grade. Book for children until eventually adult are different content. As we know that book is very important for all of us. The book Solar Powered Charging Infrastructure for Electric Vehicles: A Sustainable Development ended up being making you to know about other know-how and of course you can take more information. It is extremely advantages for you. The guide Solar Powered Charging Infrastructure for Electric Vehicles: A Sustainable Development is not only giving you more new information but also to be your friend when you truly feel bored. You can spend your current spend time to read your reserve. Try to make relationship together with the book Solar Powered Charging Infrastructure for Electric Vehicles: A Sustainable Development. You never feel lose out for everything if you read some books.

Ralph Humphries:

The guide untitled Solar Powered Charging Infrastructure for Electric Vehicles: A Sustainable Development is the publication that recommended to you you just read. You can see the quality of the guide content that will be shown to you actually. The language that writer use to explained their way of doing something is easily to understand. The article writer was did a lot of study when write the book, to ensure the information that they share to your account is absolutely accurate. You also can get the e-book of Solar Powered Charging Infrastructure for Electric Vehicles: A Sustainable Development from the publisher to make you considerably more enjoy free time.

April Baker:

Is it an individual who having spare time after that spend it whole day by simply watching television programs or just telling lies on the bed? Do you need something totally new? This Solar Powered Charging Infrastructure for Electric Vehicles: A Sustainable Development can be the answer, oh how comes? A book you know. You are so out of date, spending your spare time by reading in this brand-new era is common not a geek activity. So what these guides have than the others?
